

**THE WORLD'S  
FIRST FLEXIBLE  
APPROACH TO  
MBR DESIGN**

The flexMBR™ is the first open-source wastewater system that can accommodate MBR modules from different suppliers. It provides flexibility to switch from one membrane to another without having to redesign the entire plant.

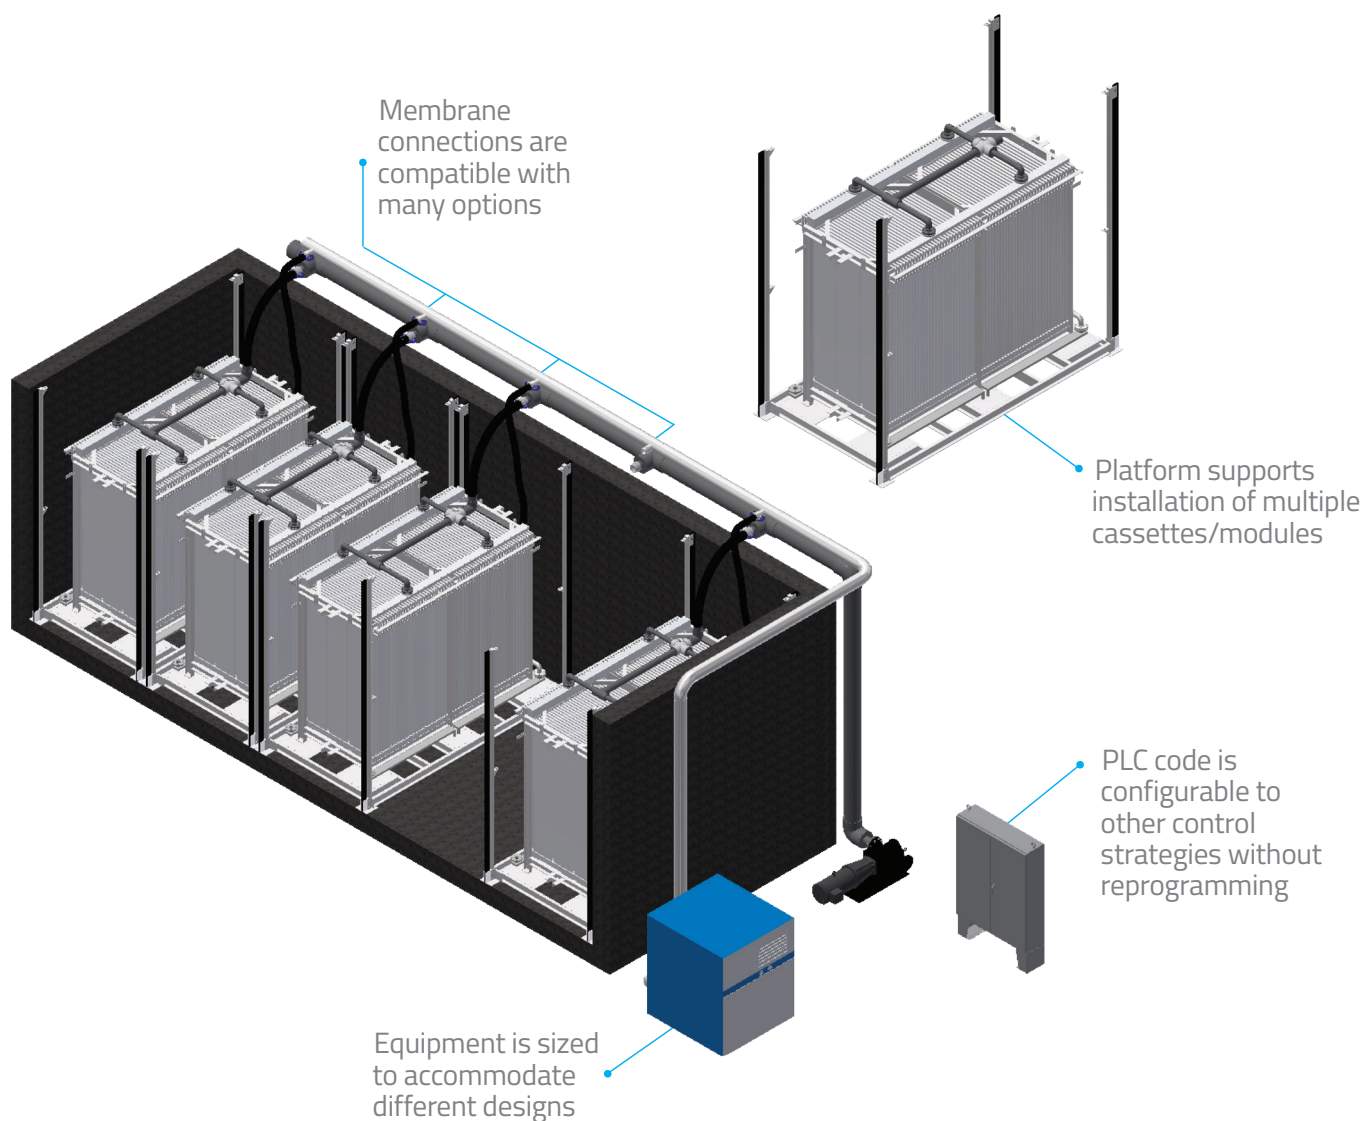

**WHY OPEN-SOURCE?**

- 1) Secure the supply of your membranes by having multiple compatible options.
- 2) Save money with negotiating power during membrane replacement.
- 3) Stay current on new developments as the industry changes and grows.

Here's what an open platform membrane design looks like at H<sub>2</sub>O Innovation:

## FLEXIBILITY = PEACE-OF-MIND

With a flexible design, you have multiple compatible options to choose from even after the initial system purchase. Whether it's to increase your plant's surface area or to select a new vendor, changing membranes shouldn't have to mean redesigning your plant.
