

## Genesol 700 Range Packaging Options

We are excited to share that we are expanding our packaging options for our range of Genesol 700 products. As part of our commitment to reduce our CO<sub>2</sub> footprint, we are now able to offer some of our chemicals in a twin lined woven bag.

We will still keep the packaging everyone has become accustomed to, the 25 kg (55 lb) white buckets/pails, but we wanted to offer a new option that has some further benefits.

### 25 kg (55 lb) White Buckets/Pails

Previously, each pallet was 450 kg (992 lb) net weight per pallet (18 x 25 kg (55 lb) buckets/pails).

This equates to:

9,000 kg (19,841.6 lb) net weight per 20 ft container  
18,000 kg (39,683.207 lb) net weight per 40 ft container.

### **NEW** 25 kg (55 lb) Powder Bags More Product, Same Storage Space

With the new packaging type, it will allow for us to increase the amount of product we can ship to 1,000 kg (2204.6 lb) per pallet. (40 x 25 kg (55 lb) bags)

This equates to:

20,000 kg (44,092.45 lb) net weight per 20 ft container  
24,000 kg (52,910.94 lb) net weight per 40 ft container

This new 25 kg (55 lb) bag design incorporates all the same information that is presented on the pails into a single design with 8 translations of the handling statements.
