H₂O Innovation Treated 62.3 Billion Gallons of Wastewater in 2025

Quebec City, August 11, 2026 – H₂O Innovation (“H₂O Innovation” or the “Company”) has just released its 2025 Sustainability Report, which highlights the Company’s key achievements across water reuse, sustainable chemistry, operational excellence, and responsible growth throughout the year.

In 2025, H₂O Innovation strengthened its commitment to a water-positive future by expanding solutions that help clients reduce freshwater dependence, reuse water locally, and improve long-term operational resilience. To substantiate this commitment, the Company assessed its 2025 sustainable water impact and found that its solutions helped treat 62.3 billion gallons of wastewater and supported 829.7 MGD of water treatment capacity, 133 MGD of water reuse processing capacity, and 243.9 MGD of wastewater treatment capacity. These results underscore H₂O Innovation’s key role in helping clients recycle more water and reduce pressure on freshwater resources.

Sustainability remains central to H₂O Innovation’s operations and value chain, from reducing carbon intensity and improving energy efficiency to strengthening environmental compliance and advancing responsible water stewardship. During the year 2025, the Company advanced several sustainability initiatives, including super-concentrated treatment chemicals, renewable-powered manufacturing, more sustainable packaging, and the continuous expansion of its WaterHub systems, which reclaim and reuse water locally within the same basin. The acquisition of Lama Sistemas de Filtrados also reinforced the Company’s filtration capabilities, while various programs supporting employees, partners, and the public continued to grow.

“2025 was a landmark year for H₂O Innovation,” said **Frédéric Dugré, President and Chief Executive Officer**. “Celebrating our 25th anniversary gave us an opportunity to reflect on the important work we’ve accomplished, but more importantly, to look ahead to what comes next. More than ever, we remain focused on accelerating decentralized water reuse, scaling sustainable chemical solutions, and integrating our new filtration expertise to help meet the growing global demand for clean, safe water and climate-resilient infrastructure.”

H₂O Innovation’s sustainability performance is mainly powered by its people, who play a central role in the Company’s mission and long-term growth. Throughout 2025, the organization continued to prioritize human rights, equity, safety, belonging, and employee development, while investing further in health and wellness programs, training, flexible work arrangements, and a culture of recognition.

About H₂O Innovation

H₂O Innovation is a water solutions company focused on simplifying water through technologies, services, and infrastructure. The Company serves municipal, industrial, and institutional clients with solutions spanning water treatment, water reuse, operations and maintenance, and specialty

products. By integrating innovation and operational excellence, H₂O Innovation has become a trusted global partner for sustainable water management. For more information, visit [H₂O Innovation](#).
